

Corporate Profile

Formerly known as AEP Power Sdn. Bhd., WCM Power was founded with the objective to establish itself as a total power solutions provider. It originated from Wengcon Machinery as a Power generation division and subsequently grew into a distributor and agent for reputable power generator brands from all over the world.

With years of experience and a strong portfolio, WCM Power has only seen rapid growth, taking on the task of generator assembly in its dedication as a one-stop power solutions provider for all power needs.

Over the years, our founder streamlined the business activities and turned WCM Power into a trusted partner of several well-known power generator suppliers while making a mark in the industry as a total power solutions provider.

Today, we have created for ourselves a strong reputation in dependability and innovation, with unmatched experience and expertise in power generation, providing a wide range of solutions for all our clients' power needs and applications.

Staying on this path of excellence, we assure continuous dedication in our service in the years to come, especially through our people, our in-house training capacity and factory training programmes and processes that ensure all our service technicians are knowledgeable in their role in providing immediate and reliable services.

MISSION

To deliver quality through our commitment to ensure customer satisfaction through ISO 9001:2008 Quality Management System that spurs continuous growth with unsurpassed business excellence.

VISION

To be a market leader that is recognised as a one-stop turnkey power generation solutions provider both in Malaysia and Asia Pacific.

VALUE

Our core values lie in constant change and innovation, which are critical factors for the survival and growth of the company. We strongly believe that our customer is our partner. Thus, putting them at the forefront of our business, we strive to use industry best practices and acquired expertise to serve their industry needs.

Not leaving behind the people that make our business a success, we also strive for our workforce to constantly be the best that they can through proper nurturing, training and motivation to be the best in the business.

These values combined have ensured WCM Power's aim to be a market leader in today's fast-paced economy.

By choosing WCM Power, rest assured that our emphasis on the quality and comprehensiveness in our products and services are what make our clients' businesses a success.

What We Do

WCM Power is today a one-stop turnkey power solutions provider in the power generator industry. We are able to design, build, test, and install power generator sets and mini power plants, all made specific to our clients' project requirements.

Using only high quality engines, we produce these generator sets through our house brand WCM Energy. Customised to client specification, our generator sets ensure fuel efficiency and low operating and maintenance cost. Following industry best practices, especially in terms of safety, we ensure that every power generator set is fully tested at our factories before delivery to clients.

At WCM Power, we take our job the extra mile by providing after sales services including the supply of spare parts, maintenance and servicing of equipment. Our experienced servicemen are able to troubleshoot engine problems efficiently and provide the required advice, parts and repairs.

We also house the expertise needed to consult and deliver a comprehensive Contract Servicing maintenance programme that includes regular inspection and operational testing to identify issues long before disasters occur. Such programmes ensure cost and risk management is under control, whereby costly unscheduled downtimes can be prevented.

Through our Power Generation Industrial division, we have built an astounding reputation as designer, builder and supplier of diesel and gas engine power generator sets for both local and foreign markets.

We are the proud owners of the WCM Energy generator sets, our home-grown brand, which we design and custom build according to client requirements while also following international specifications. It comprises of diesel and gas engines that are of high quality with fuel efficiency and low operating and maintenance cost. It also uses alternators that are brushless, self-regulating, self-exciting, drip-proof, screen protected and fully tropicalised.

Our commitment and continued perseverance has also won us the trust and confidence of larger players in the power generation

industry, having been awarded the distributorship of Nippon Sharyo (Nissha) generators, Kohler residential gas generators and JCB generators.

All world renowned and quality manufacturers with decades of experience, this exclusivity has given us a strong foothold in the industry, being able to cater to more specified needs.

As a power solutions provider, we also offer the design, fabrication and packaging of customised rotating offshore solutions related to engine operations in the oil and gas industry.

We take our offer further with our engineering expertise in the assembly, installation and testing of generators, radiators, skid bases, acoustic enclosures and control systems, among other components.

We pride ourselves in our customisation factor, taking into account that clients have limitations that need to be overcome through the ability to assemble generator sets using parts from a combination of suppliers that are rarely practiced by other industry players.

Our division also supplies diesel and gas generator sets, diesel-driven air compressors, Zone 2 hazardous area generator packages, micro turbines and turbines. Our other capabilities include that of being able to deliver with the assurance of reliability and quality.

Ensuring a full suite of services to customers in the offshore oil and gas industry, we also provide services such as front end engineering (FEED), cost reduction analysis and project management, managed and carried out by trained and skilled individuals who mirror the company's dedication.

Renewable Energy Division (RED)

In our journey to becoming a one-stop power solutions provider, we realised the growing need for alternative energy in various industries. This quickly turned into our passion to take the business further and fulfil alternative energy needs by establishing ourselves as a turnkey solutions provider of renewable energy solutions

We use major renewable energy sources including solar power, biogas, biomass and hydropower in creating sustainable environments and ensuring more economical ways to meet our customers' needs. To date, we have created and delivered innovative, reliable, efficient and clearer energy solutions to clients primarily in the oil and gas industries.

The uniqueness we bring to clients is our ability to deliver optimum renewable technology, by also

offering the expertise to come up with the best solution to client's needs. Right from project design and development to engineering, management and operations, we ensure that every need is taken care of.

Through our role, we aim to provide renewable energy solutions that also contributes towards sustainable growth of the environment. We do this by ensuring that our operations, services and products also make significant impact to society and environment.

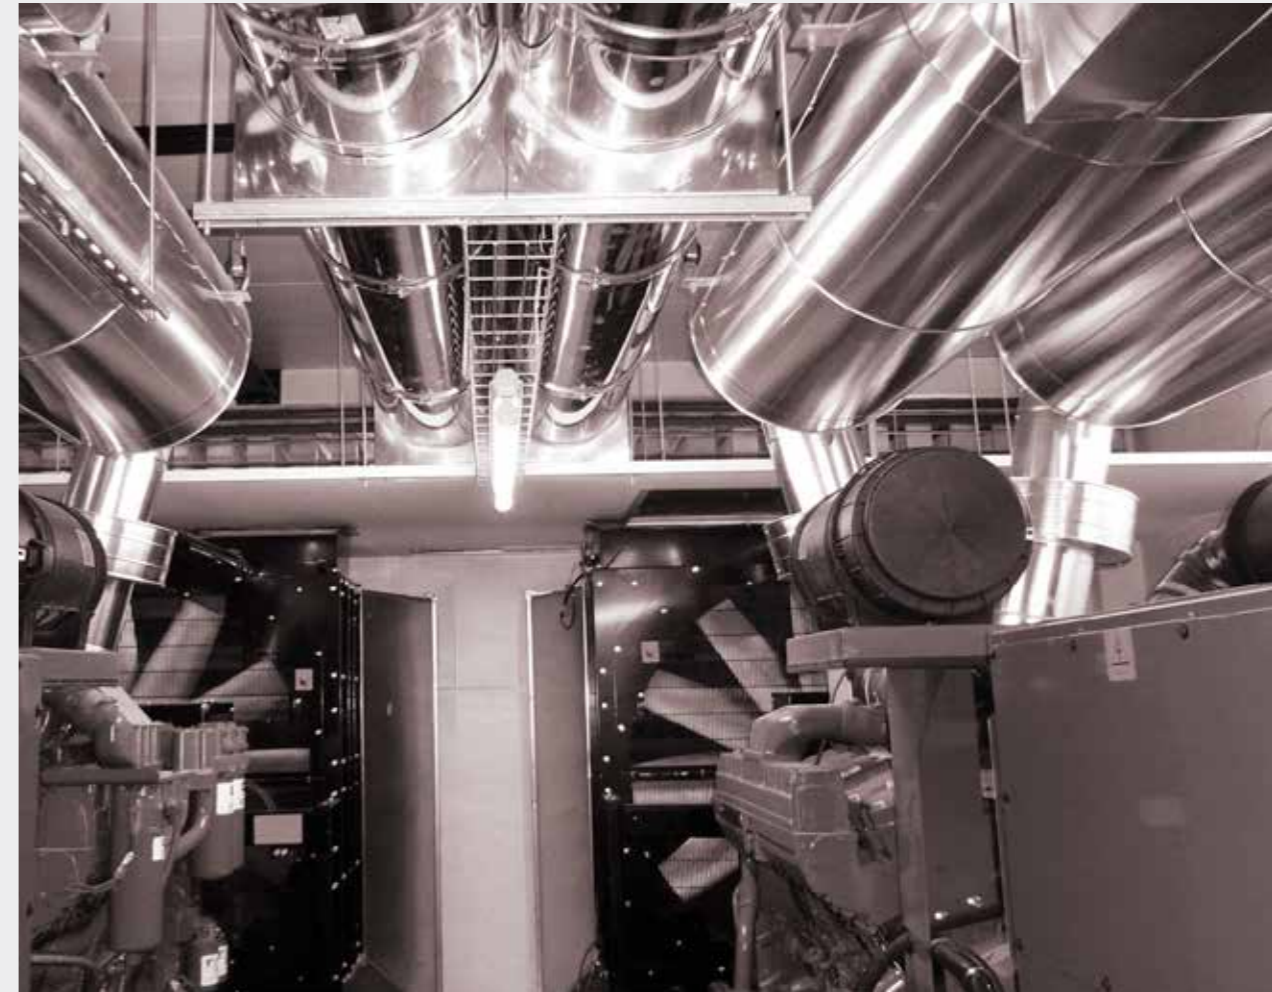

Mechanical & Electrical Division (MED)

WCM Power also offers mechanical and electrical competencies that are unequalled in our services, expertise and approach to clients. Going beyond one-off mechanical and electrical construction and engineering projects, we are focused on long term relationships right from design and feasibility through to execution and project management, site activity and maintenance.

Our mechanical services comprise of heating ventilation, air conditioning, cold water and sanitary plumbing, fire protection and lift systems, with the ability to cater to all mechanical needs.

Through our electrical solutions offer, our expertise lie in the conduct of low voltage electrical work ranging from domestic and public application to commercial installations. Our high voltage electrical offers lie in civil, jointing and termination works ranging from 11kv up to 132kv distribution systems.

We have also established a reputation in having completed numerous projects in underground telecommunications network and cabling works apart from other M&E services including design management, information and technology solutions, and engineering, procurement, construction and commissioning (EPCC) total solutions.

Capitalising on our proprietary brand, expertise, exclusive dealerships, comprehensive factory facilities and affiliates, WCM Power has supplied its services to significant national projects such as the Government solar hybrid, water works, rural development and other projects under various ministry departments.

Apart from having technicians and servicemen who are specialists in the design, delivery, installation and handling of high-end power applications and systems, our offerings thus far encompass total power solutions including oil and gas for upstream and downstream activities, generators with medium speed, high tension applications ranging from 3kV to 11kV, gas fuel burning engine applications and other applications.

Some of our local clients include Tenaga Nasional Berhad (TNB), Malaysia Airports Berhad (MAB), Bousted Plantations Sdn Bhd, Telekom, Petronas among many others.

Over our years of operations, our reputation has preceded us, this true in the rapid growth of our export market. Today we also lend our services to markets in the Middle East, Africa, Pakistan and countries in the Southeast Asian region.

Facilities

We house our facilities in Kota Damansara, Petaling Jaya, where we manufacture, rebuild, re-engineer, design, fabricate and wield our generator sets and other equipment.

We house our facilities in Kota Damansara, Petaling Jaya, where we manufacture, rebuild, re-engineer, design, fabricate and wield our generator sets and other equipment.

Our experienced multi-skilled workforce are also stationed at the facility, ensuring that clients' short-term and long-term needs are met with utmost precision and quality.

The facility centre, an integral part of the business and our service, is where we conduct testing of our products, come up with design and engineering capabilities and create power solution packages such as switch gears, fire detection and suppression systems apart from the availability of material handling areas and our load test room.

Designed in compliance with the Department of Environment Malaysia standards, the room tests the actual performance of the power generator sets. At the time of testing, clients are given the chance to also monitor the performance of their sets' voltage, ampere, frequency, and fuel consumption in the comfort of our readily available witness test room.

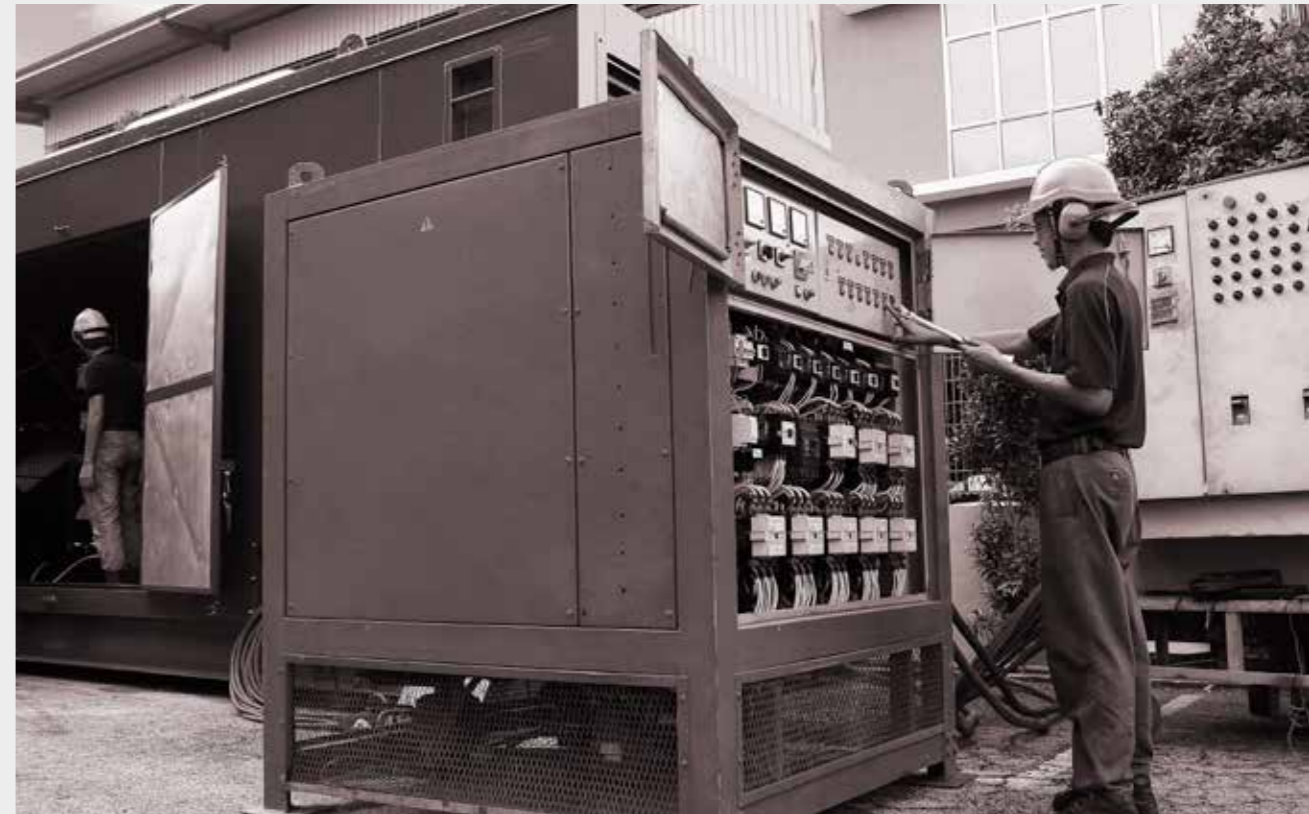

After Sales Services

Even after we've completed a sale, service and delivery, WCM Power believes in taking those steps further by protecting our clients' investment through our array of after-sales services.

We provide power generation equipment parts and accessories, assuring the possibility of short lead times with the delivery of genuine OEM parts.

Again not leaving behind our talented workforce, our service technicians are also available at the clients' beck and call, be it repair work, troubleshooting or emergency services that require any level of attention. They are trained to be able to determine the best solution to any power generation application.

Other services include equipment revamps, startup services, load bank tests, remote monitoring, round-the-clock stock of parts and maintenance programmes that allow equipment to constantly run with optimum efficiency
